

SKILLS

- Javascript.
- Node.js.
- TypeScript.
- Express.
- ReactJS.
- Vue.js.
- Next.js.
- PHP.
- Laravel.
- Doctrine.
- Eloquen.
- MySQL.
- Redis.
- Git – GitHub.
- Patrones de diseño.
- Symphony.
- Slim.
- SQL.
- AWS.
- Express.

EDUCATION:**Expected Graduation 2023**

In the fourth year of Systems Engineering, National Technological University San Francisco.

Kiwing IT Labs 2018

Training "OnBoarding" in Node.js, React.js, Redux, JavaScript.

LANGUAGES

- English: B2.

Experience:

- **ROOFTOP DEV LAB:**

- **Internal Project at Rooftop.**

(January 2021 - Presente).

My current project at Rooftop is another recruitment tool. Nowadays we are developing a very first alpha version with bounded behavior.

Technologies: PHP + Laravel + MySQL + Beanstalkd.

- **Teen Hire**

(Jun 2020 – Jan 2021).

The most ambitious project I have worked on so far. An automatic recruitment tool for companies. It analyzes thousands of profiles and gives you the best ten candidates per day according to the company stack and needs. I really enjoyed taking part in the first steps of Teen.

Technologies: PHP + Laravel + MySQL + Redis + Beanstalkd.

This project helped me understand lot of concepts, like managing heavy background jobs, scrap tons of data from different sources or the OODA cycle in business data. Unfortunately we couldn't put into practice most of the ideas we wanted because there wasn't enough time, but we could try some amazing technologies like Neo4j and Elastic search's stack.

- **Friscop**

(Feb 2020 – Jun 2020)

A landing and a small project WordPress like system. I didn't like the result of this system actually. If I had the opportunity I would do it again with major changes. It was a multi-tenant landing system for a marketing company.

Technologies: PHP + Laravel + Doctrine + MySQL + Redis.

- **Unilever**

(Dec 2019 – Feb 2020)

Unfortunately this project was cancelled before finished. It was an "e-commerce" like system, part of a write-off management. I developed only the API that the app used.

Technologies: PHP + Laravel + Redis + MySQL.

- **Axion Lift.**

(Oct 2019 – Dec 2019)

This was a short but really interesting project for a big aerial lift factory in San Francisco, Argentina. They needed a solution to keep their blueprints updated for who made them. I had to work with Google Drive API and listen to changes in document to send notifications.

Technologies: PHP + Laravel + Beanstalkd + MySQL applying Webhooks and a Google API.

- **Internal Project at Rooftop.**

(Jul 2019 – Oct 2019)

I helped to develop an experimental tool to an area of Rooftop Dev Labs.

Technologies: Node.js applying WebSockets and consuming an external HTTP API.

- **Jugaad.**

(Nov 2018 – Mar 2019)

My trainee project, a simple tool to help a recruitment startup to store and track its candidates. This was my very first experience working at Rooftop Dev Labs.

Technologies: It was developed in PHP + Laravel + MySQL.
